TITLE : ELECTRONIC BLACKBOARD

ABSTRACT : PURPOSE: To display picture image information simultaneously between plural electronic blackboards by providing an image information communication means that displays an image corresponding to an original on other display means, and at the same time, displays the image displayed on the display means on other display means.

CONSTITUTION: At first, reception waiting buttons 22 of console panel sections 9 of plural electronic blackboards that make information communication are depressed. When it is desired to display the picture image of an original on the other electronic blackboard, the original is set to an original input section 7 and the transmitting button 24 of the console panel section 9 is depressed. Then, the information of the original is received by the receiver of other electronic blackboard as signals, and displayed on the face of a display board by a toner image forming means. When it is desired to display the image on the display board face on other electronic blackboard, the transfer button 26 of the console panel section 9 is depressed. Similarly, the image is displayed on the display board face by the toner image forming means. Conversely, information sent from other electronic blackboard is displayed on the display board face 5 properly as the reception waiting button 22 is depressed.
